Introducing Biozone's backup water and filtration systems!

Biozone has just completed yet another remarkable backup water treatment project in Kyalami, where our client entrusted our team of experts to create a reliable solution for their water needs.

The backbone of this project is our state-of-the-art fully automated system, meticulously crafted to deliver "whole-house" treatment from a borehole source.

Say goodbye to unwanted particles and hello to crystal-clear water!

Prefiltration

Our approach incorporates cutting-edge prefiltration techniques, removing impurities and contaminants right from the source.

Bacterial Removal by Ozone Circulation

We believe in providing pure water that meets the highest quality standards and prioritises health and well-being. This system employs ozone circulation to effectively eliminate harmful bacteria, giving clients peace of mind with every drop. Our top priority is ensuring compliance with the strict regulations and drinking standards of SANS 241, and we are thrilled to say that we have achieved just that!

With this innovative backup water treatment solution, our clients can now enjoy a continuous supply of high-quality water for their household needs. This system provides peace of mind during water shortages or disruptions and contributes to a more sustainable future by making the most of available resources.

Stay tuned for more updates and exciting projects as we continue to innovate and bring cutting-edge solutions to meet your water needs.

Remember, at Biozone Manufacturing, we are here to keep your water flowing by Harnessing Nature's Technology!

Celebrating the Biozone ladies this women's month

The success of Biozone Manufacturing is only possible with the incredible ladies in our team of experts. This month we celebrate them and our loyal clients, thank you for your ongoing support.

Cheryll Wright - CEO

Cheryll Wright is the dedicated CEO of Biozone Manufacturing, bringing three years of experience to the company. Her meticulous attention to detail and patience have revolutionised the accounting practices within the organisation. Cheryll's expertise has been instrumental in streamlining financial operations. In addition to her business acumen, Cheryll has demonstrated her communication and leadership skills through her extensive long-term membership of Toastmasters International, of which she has been past branch president and often called on for her judging of speeches. Her involvement with Toastmasters showcases her ability to inspire and motivate others, making her an exceptional leader both inside and outside the workplace.

Sia Vieira - Admin Controller

Sia Vieira is the proficient Admin Controller at Biozone Manufacturing, contributing her talents for the past two years. Sia has displayed remarkable growth in her role, ensuring that all administrative matters are up-to-date and well-managed. Recently, Sia celebrated a joyous milestone in her personal life, as she married her husband Mike.

We extend our heartfelt wishes for a blissful and prosperous future to Sia.

Fionna Kipling - Digital Marketing Coordinator

Fionna Kipling has joined Biozone Manufacturing as the Digital Marketing Coordinator, making an immediate impact on the company's online presence. Despite her relatively short tenure of a few months, Fionna's skill set in digital marketing, combined with her entrepreneurial background, has significantly changed Biozone's marketing endeavours. Her unwavering dedication ensures that all marketing initiatives are meticulously executed. Fionna's valuable experience in owning businesses enhances her effectiveness in her current role.

Cross Border Water Solutions

Biozone Manufacturing has worked tirelessly to engineer this cutting-edge water purification system, tailor-engineered for our customer in Botswana.

This unique off-grid borehole water purification system uses the latest advances in ozone technology to perform the following :

5 Gram Ozone Generator - Bacterial removal by ozone circulation.

500LPH Reverse Osmosis - Filtering out unwanted molecules and contaminants.

Triple Stage Filtration - 5 micron | GAC | 10 micron.

Ultra Violet Steriliser - Breaking down chemical bonds and microorganisms.

All our systems undergo a factory acceptance test, throughout quality control and wet testing. Putting our technology into operation to ensure correct electrical connections of all machines and their communication with the control system.

After passing quality control the system was delicately loaded into a secure wooden crate, ready for its journey to our valued customer in Botswana.

Biozone is dedicated to providing the highest quality water purification systems and supporting you at every turn. Stay tuned for updates to witness the commissioning of this game-changing system in Botswana.

If you're interested in our off-grid borehole systems, contact Biozone Manufacturing for more information.
